

robit

Robit Technology started its business life in 2008. It operates mainly in electronics, informatics and software areas for development of value-added projects.

We design and produce in electronics locally and sell our products both domestically and internationally. Many value-added projects have been developed in field of electronics. Mainly universities, hospitals and security units use these products.

In the field of informatics, we work with the pioneering producers of the field such as **Cisco, HP, HPE, DELL EMC, VmWare, Oracle, IBM, AIO, Fortinet, Pure Storage, Veeam, Fujitsu, Lenovo, Microsoft, Aruba, Palo Alto**. Our company has many references on supply and integration of informatics products, and we also hold highest degree certificates of Cisco, HPE ve DELL EMC brands in the field. We serve our customers with our personnel specialized on risk management, disaster recovery centers, information security systems, cloud computing infrastructure and data analyses, network security, backup and close circuit low-tension current systems. Our company carries on Videowall, system control room infrastructure, setups and physical area security works that are necessary in this field. Through the vision we have developed in this field, we create solutions about public integrated information systems and data centers.

For us, software consists of JAVA based works. Our expert software team carries on business intelligence, plug-in development, data warehouse setups, SOA, Data Migration works and enterprise application development works.

As a part of our Traffic safety works that we have started with the motto **“No Death in Traffic,”** we have been the only distributor of **SENSYS Traffic AB since 2009**. Our studies to minimize loss of life and property in traffic increasingly continue, notably with EDS, TEDES systems. We owe our thanks to notably to our private customers who are above 5000, and to 59 different universities, more than 70 public institutions who execute their projects with us and also to the over 500 companies which show their support by the projects we carry on together.

We wish to work together with you in value-added projects and steer technology...

technology

# Digital Transformation Begins

---

## How ready we are for digital transformation?

Between the years 2014 and 2015, there has been 23.8 trillion worth investment for digitalization worldwide. Are we ready for this digital transformation on control of the workflows, service agreements, system managements, capstone designs, cyber security systems, big data warehouses and analytic studies, mobile platforms, cloud technology and IoT?

## Network Solutions

To build a strong communication infrastructure with your customers or for your company employees, providing Internet access for their mobile devices, computer and similar devices is only possible through a strong infrastructure. Through our rigorous data center works, we execute your projects with easily anageable, analytic data reporting, secure and low budget solutions.

# Medical Works

---

Digitalization increases day by day within the scope of hospitals and health institutions in our country. In scope of hospital automation system software, system structures on many areas from imaging units to wireless access products and data center infrastructures and its active devices are designed.

As part of PACS, zz that shows DICOM radiology images is produced 100% domestically with **DINEGA** and is available for our customers.

# City Security Systems

---

Digitalization increases our control and analysis skills on problematic city issues such as lighting, central management, traffic, parking problems, city security and zoning. Through works in this field, network devices and IoT products are designed for our customers that are required for many products such as intelligent lighting, traffic control, city security, and Smart Park Assist for parking problems.

One of the biggest problems of cities is City Security. For a more viable city information obtained through automated detectors and cameras decrease the crime rates. Through works in border security, airport security, road safety systems, hotels security, smuggling, immigration and border violations could be detected. It is important with respect to security that these are tracked with a central system and checked by chart-based operators. Thorough solutions, services and products should be provided on this area.

## Campus Solutions

Access controls of multiple users as a part of campus solutions has become important for institutions and universities. Accesses are control via “White List” logic to control data. With this new application used in new generation data centers unauthorized use is not possible. Your data canter does Risk management for you and differentiates between low-risk, risky, medium-risk and high-risk users.

We produce solutions for institution personnel continuity control systems, patient recognition systems for hospital and health campuses, high-level security passage systems, university dorm control systems, stadium, hotels, public building, airport, prison security systems, cafeteria automation systems, pre-paid area entrances, library automation systems and point to point network solutions.

## Cyber Security Solutions

As Internet has become a part of our lives, future restrictions on this area cause difficulties in accesses and use of indirect communication methods. After many cyber attacks, protection of data and restoration is as important as preventing future attacks. It is also very important to educate users on the security applications that will be used.

# Infrastructure Solutions

---

Infrastructure - We work meticulously to provide uninterrupted communication from selection of the best equipment for infrastructure systems, design of the project and to its application. Ventilation system, fire suppression, fiber infrastructure works, power systems and board works, platform view, copper cabling, cold air corridors, secure passage control systems are done by our company.

Our company provides all communication infrastructures necessary for an institution to our customers after detailed studies. In our works, we pay utmost attention to physical security and lasting infrastructure.

# Datacenter Security

## Extra security

Additional security is needed to several datacenter projects. Data center security aims to make that data less accessible to hackers or anyone else who may seek unauthorized access.

## Biometric Solutions

One type of data center security is physical security. Experts may recommend various kinds of facilities or site security such as setbacks, landscaping, thick walls, and other aspects of a building that will create physical barriers around the data center.

## Data Security

Another main component of data center security is essentially network security. Because data centers are served by networks, security engineers need to plan adequate protections into those network trajectories that run to a data center. That may mean installing firewalls, anti-virus programs, or anything that prevents data breaches or other security issues. Robit gives solutions all data security platform for your datacenter projects.

**Command Control is A  
Powerful Operation Tool**

**We Work For Intelligent  
Transportation System**

## Meeting and Conference Room Solutions

Robit Technology offers for their customers the most appropriate and robust conference room solutions by using advanced network infrastructure systems. In the meetings held, the projection of the presentation, simultaneous work on the project, to playback of media and to attend the meeting as a teleconference are requested. We make it solutions as a Collaboration Systems and Videowall Monitoring. These systems are used in Presidency of the Republic of Turkey and Turkish Naval Forces.

# Service

---

## Network Service

We offer a complete range of dedicated solutions designed to support your business and help it grow beyond borders. Access any content on the Internet with our secure global international IP connectivity, expand your reach through our high performance international bandwidth and IP MPLS services. Whatever your growth plans in this dynamic and exciting market, we'll have your back while you stay focused on the next opportunity.

## Datacenter and Cloud Service

We are proud to offer a suite of highly flexible and scalable Cloud and Data Center Solutions available in several DCs worldwide, with key assets and a strong presence in Turkey. Customers can experience top class integrated IaaS, PaaS and SaaS that meet the ever growing need for cost efficient and high security IT solutions. The Sparkle portfolio includes our next generation Data Center HUB in Palermo Sicily, that provides customers in the world's most popular content and a superb user experience.

# Military Communication Solutions

Military communications or military signals involve all aspects of communications, or conveyance of information, by armed forces. Military communications span from pre-history to the present. The earliest military communications were delivered by runners. Later, communications progressed to visual and audible signals, and then advanced into the electronic age.

Present-day military forces of an informational society conduct intense and complicated communicating activities on a daily basis, using modern telecommunications and computing methods.

The communication systems are designed exclusively to fulfill secure and seamless voice and data communication demands of Land, Airborne and Naval platforms.

Robit Technology provides complete solutions for military communication systems. We trust our strong expertise on information technology solutions. We believe in continuous learning so we support our employees technical educations. We are ready with our certified technical professionals to provide high-end solutions.

## IP Mobility For Dynamic Warfare Element

electronics

## IOT Products and Solutions

---

Robit Technology continue one's works on the sector of IOT which has increased in recent years and where technology is used effectively as a manufacturer and integrator company. Today, 400 million devices are connected to the Internet and it is estimated that there will be 500 IOT products in each home.

Robit Technology has determined a vision as taking a leading part of IOT sector. With our IoT devices, we develop products and projects in smart home and smart city concepts. We design and manufacture devices of media, remote control and security products for the home and also communication networks projects that can work in emergency scenarios for smart cities.

Robit Technology provides, in IOT products and projects, end-to-end service with development of electronic hardware and embedded software in addition that network installation.

## Enterprise Drone Solutions

## Design and Skills Workshop

There are course curriculum and classes on the agenda of many developed countries including our country, which one will help to discover and develop children's abilities and also to prepare them for future technologies and lives by providing them with new skills. Especially in this education model called STEM, children learn by trying and observing information.

The following projects can be shown as the progress in this scope in our country; Deneyap Workshops were built by Presidency of the Republic of Turkey, Vocational Training Workshops or Design Skill Workshops ( TBA ) were built by Ministry Of National Education, and also Life Skill Workshops ( YBA ) projects were realized on the basis of provinces. Robit Technology, as an associate oneself of this vision determined by our country, has designed the workshops and started demo projects bases of our experiences we have obtained from our works.

Robit Technology, with more than 150 projects; has completed Vocational Training Workshops, Special Practice Houses, Special Education Classes and Guidance Services, Wood and Metal Workshops, Design Skill Workshops ( TBA ), Life Skill Workshops ( YBA ) and Deneyap Workshops ( Deneyap Atölyeleri ) with delivered by design, construction and installation. Robit Technology provides services and conducts the projects in each region of Turkey; therefore, it has adopted the installation and delivery of these workshops in all our schools as its vision and mission within the scope of 2023 Education Vision.

# A New Generation Street Bench

Global environmental circumstances call for concrete steps toward change in behavior of urban citizens. Cities are overcrowded, and renewable energy and environmental protection have become the key economic and social challenges.

Street furniture is a simple entry point to a world of smart cities. A relatively simple looking product, but with vast usage potential, a solar powered bench comes with multiple functionalities – a wireless charging pad and charging ports for wired phones and other smart devices, night illumination, energy saving main controller, data collecting etc.

Our smart bench has in-built sensors for data collection and analysis, gathering information on, for example, the number of bench users, operability of various components, and atmospheric conditions. Additionally, bench owners can easily change settings on the dashboard.

With its simple design and convenient size, Steora can be installed anywhere, outdoors and indoors.
